

REDX SPECIFIC

H E S CONCRETE (HIGH EARLY STRENGTH)

APPLICATIONS

Post Tensioned Slabs

Precast Elements

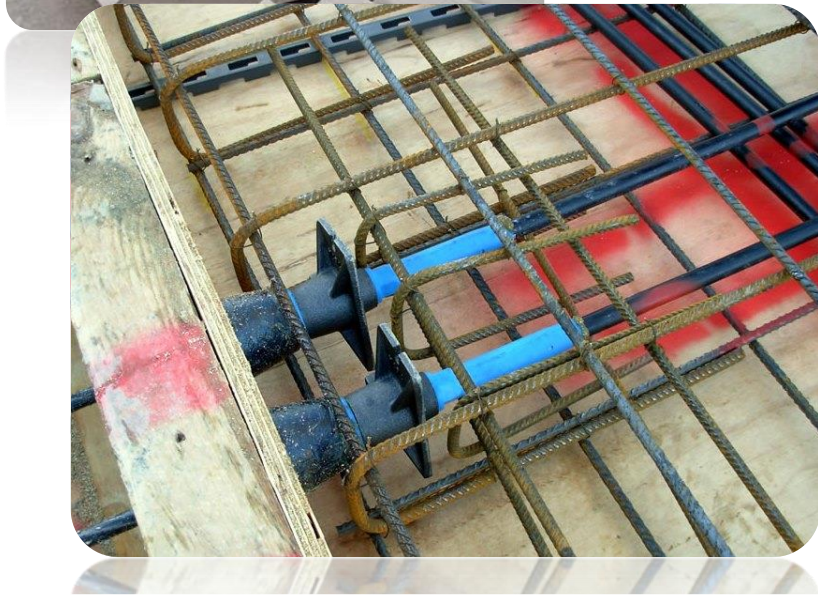

Early form release

Cold Weather concrete

H E S CONCRETE (High Early Strength) is specially designed to enhance the early strength development in concrete. It allows form release and post tensioning. It can also be conveniently used in precast elements

Advantages

- Early strength gain permits post tensioning
- Early form release possible during Precasting
- Saves project time schedule
- Can be used during cold weather

Design Characteristics

- High performance High strength concrete designed to match the project specifications
- Early strength requirement specification shall be included at the design stage.
